

I'm a programmer. I love it, I've been doing it since I was twelve, and I can't imagine doing anything else. At a young age I've worked for startups as small as three people to companies as big as twenty thousand. I bring software agility, I'm about seizing the goal even with many obstacles and all in record time. It's what this career is about, it's what software companies are looking for, and most importantly, it's what I provide.

## **SUMMARY**

- Expert in: Javascript/Node.js, Java, NetSuite's SuiteScript, Bash
- Intermediate in: MATLAB, Visual Basic, Python, Verilog, C, C++, C#, ASP.NET
